Re: Expression of Interest in Software Support for Teton School District #401

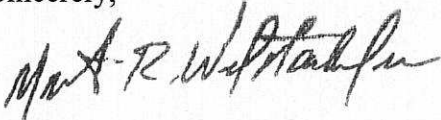

Eastern Idaho Technical College (EITC) has a cloud-based system which allows access by authorized users to software applications commonly used in business, education and elsewhere. These software applications reside on a separate server system at EITC and are available through the Internet for instructional use by school districts.

We recognize that there are costs associated with use of these applications including software licensing, server costs and labor and have been briefed on probable costs. We also understand that we would only be billed for direct costs associated with the program. No charges would be included for indirect costs such as building upkeep and overhead.

There appear to be substantial benefits to participation in this program including reduced hardware and software costs, reduced labor costs at the school district, scheduling flexibility and the ability of students to use the system from any location and any type of device.

Teton School District #401 is interested in participating with EITC in this program. We look forward to developing with you a Memorandum of Understanding which formalizes an agreement for these services.

Sincerely,

Monte R. Woolstenhulme, Superintendent
